# Determining Oxidation Numbers

1. Atoms in elemental form: Oxidation number is zero.
2. Monoatomic ion: Oxidation number equals the charge.
3. Oxygen: Usually -2
4. Hydrogen: bonded to nonmetal, usually +1; bonded to metals, usually -1
5. Fluorine: Always -1
6. Other Halogens: Usually -1. Bonded to Oxygen?
7. sum of oxidation numbers for neutral compound is zero, some for polyatomic ion is charge of ion.

# Determining Oxidation Numbers

Monoatomic Ion	Charge on Ion
Hydrogen Bonded to Nonmetal	+1
Hydrogen Bonded to Metal	-1
Oxygen	Usually -2
Fluorine	-1
Other Halogens	Usually -1
Neutral Molecule	Sum of Oxidation Numbers is 0
Polyatomic Ion	Sum of Oxidation Numbers is Ion charge
